Cluny Abbey- 17<sup>th</sup> century A.D.

## Accessible to everyone

With Novo3d you can visit places that are inaccessible and make them available to everyone. Now it is possible to experience the missing monuments, to navigate on Mars or into the deep sea, to rediscover the human body or the infinitely small.

Our real-time 3D worlds, virtual and interactive environments, now put the adventure within reach.

## To share and to connect

The most efficient way to share and pass on knowledge, to connect a person and a place together, is to live through the experience.

Today, using technology only is not enough anymore to fulfill this purpose. The very creation of the experience has become the crucial point of this transmission.

And that's what Novo3d offers.

# ARCHAEOLOGY - WORLD HERITAGE - ARCHITECTURE

Dancing «the Aérien» - 1952 AD.- Marmande

## Immersion

The technology from the very demanding world of video games can finally achieve a brand new level of realism in real-time 3D. Every element, every detail, can be represented near and far. This is not about 3D scenes anymore, this is now a matter of credible, realistic and dynamic virtual universe.

## Interactivity

Discuss with the people of these ancient times and relive their daily lives, try out different historical theories, make some artifacts turn from old to new, walk into virtual museums and be able to explore the same place over different periods of times, and much more. Our virtual environments can multiply the museums' possibilities in storytelling.

## Know-how

In opposite to heavy, proprietary solutions, Novo3d offers virtual environments that can be used on any websites or on-location platforms. Flexible and designed to meet your specific needs, our productions are tailor-made and offer rendering quality, ease of use and rich content.
